

# request

September 29, 2021

```
[1]: import requests
import pandas as pd
```

## 0.1 Let say

Let say, TWTR.csv is my realtime data (follow [realtime-evolution-strategy.ipynb](#)), remember, we trained using `Close`, and `Volume` data.

So every request means new daily data.

You can improve the code to bind historical data with your own database or any websocket streaming data. Imagination is your limit now.

```
[2]: df = pd.read_csv('TWTR.csv')
df.head()
```

```
[2]:
```

	Date	Open	High	Low	Close	Adj Close	Volume
0	2018-05-23	32.700001	33.430000	32.599998	33.419998	33.419998	13407500
1	2018-05-24	33.439999	33.759998	33.119999	33.520000	33.520000	14491900
2	2018-05-25	33.540001	33.990002	33.310001	33.630001	33.630001	10424400
3	2018-05-29	33.419998	34.830002	33.349998	34.040001	34.040001	22086700
4	2018-05-30	34.200001	34.660000	34.080002	34.360001	34.360001	14588200

```
[3]: close = df['Close'].tolist()
volume = df['Volume'].tolist()
```

## 0.2 Check balance

```
[4]: requests.get('http://localhost:8005/balance').json()
```

```
[4]: 93.51999599999999
```

This is the initial capital we have for now, you can check [agent.ipynb](#) how I defined it, or you can overwrite it.

### 0.3 Trading

```
[5]: import json

data = json.dumps([close[0], volume[0]])
data
```

```
[5]: '[33.419998, 13407500]'
```

Remember, my last training session was only used `Close` and `Volume`, you need to edit it to accept any kind of parameters.

```
[6]: requests.get('http://localhost:8005/trade?data='+data).json()
```

```
[6]: {'action': 'fail',
      'balance': 93.51999599999999,
      'status': 'data not enough to trade',
      'timestamp': '2019-08-31 02:40:10.625022'}
```

Reason why you got 'data not enough to trade', because, the agent waiting another data to complete the queue, atleast same as `window_size` size.

Last time I defined `window_size` is 20, means, it only look back 20 historical data to trade.

Assume now, you have 100 times new datapoints going in, you want to trade these datapoints.

```
[7]: for i in range(200):
      data = json.dumps([close[i], volume[i]])
      requested = requests.get('http://localhost:8005/trade?data=' + data).json()
      print(requested)
```
